25X1

Responsiveness of the SIGINT System to Consumer Requirements

References: a. USIB-  11 September 1972
b. USIB-  18 October 1972

25X1

1. The Committee discussed various pros and cons of using existing mechanisms within the Committee structure to develop a means to determine the degree to which SIGINT requirements are being satisfied. Taking into account this discussion the Chairman established an Ad Hoc Group and designated  of the IC Staff as its Chairman. Those members of the Committee who have an interest in this group are requested to provide the SIGINT Secretariat with the names of their representatives.

25X1

2. The first task of this group will be to develop terms of reference to be submitted to the Committee for approval.

3. Following approval of the terms of reference the mission of the Ad Hoc Group is to develop a mechanism by which the SIGINT Committee can routinely report on the degree to which SIGINT requirements, from both overhead and ground collection, are being satisfied. The Ad Hoc Group's approach should be to first consider ELINT, then Telemetry and finally COMINT, if feasible.
